

Clockwise - Timer

By Sigge Arkestål

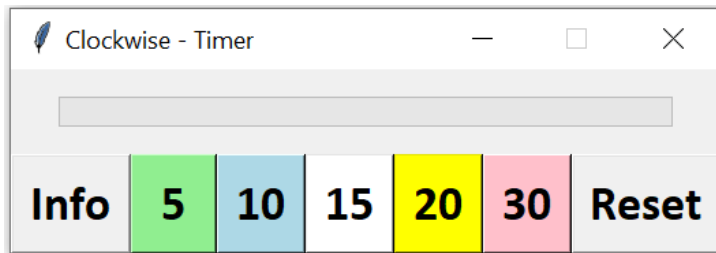

Clockwise - Timer

A digital timer designed for people who need extra support keeping track of time.

A good area of use is on student computers in elementary school, high school or other post-secondary education.

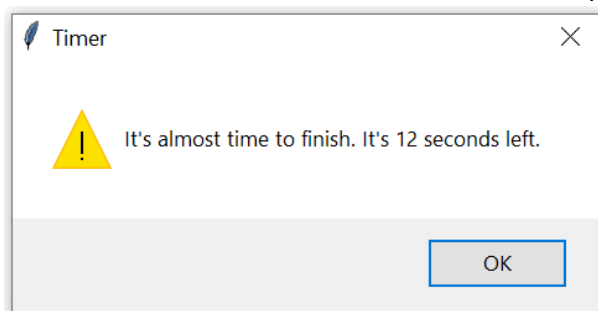

For people who want to keep track of time on their own instead of, for example, timers in the classroom or at home.

How the timer works

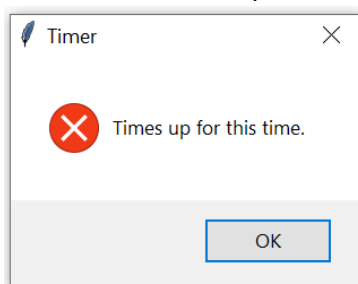

Click on the desired time (5, 10, 15, 20, 30 minutes). The countdown starts immediately after you select.

When 20% of the time remains, a reminder appears:

When the time is up, the following is displayed:

Right-click to enter your own time (in seconds), stop the timer, or change the direction of the countdown.
